**PHASE ONE DRILLING BEGINS AT AKAIWONG**

Vancouver - The Company is pleased to announce the commissioning of its Ingetrol MD Explorer drill rig. Technical staff from Ingetrol have supervised the assembly and operation of the rig, located at the Company owned Akaiwong Project, in Guyana. Paul Pelke, a Qualified Person under NI 43-101, and technical supervisor to the program, is on site to supervise drilling and core collection on behalf of the Company. A Phase One drill program is now underway. All samples will be processed by ACME Laboratories of Georgetown, Guyana, an ISO Certified Laboratory. Samples will be on one meter intervals initially, and will involve metallic assays.

The Akaiwong Project is located 20 kilometers south/east of the Aurora Project, currently under evaluation by Guyana Goldfields ( GUY.TO ). Akaiwong has been historically mapped as an intrusive into greenstone rocks. The Company is conducting a ground magnetometer program to confirm and better define this structure. The drill program is designed to confirm and expand the known areas of gold mineralization. Gold mineralization has been located in the weathered zone, the intrusive, and the surrounding greenstone rock. A total of 32 holes have been drilled to date at Akaiwong by previous owners. Of these holes, twenty were to a depth of less than 75 meters. The program now underway will involve depths exceeding 200 meters.

The historical drill results (1989, 1990 and 1992 exploration records indicate assays were generally on a one meter interval basis prior to the commencement of the 2006 diamond drill program) are provided and reviewed by Dr. A. D. Drummond, P.Eng., a Qualified Person as defined in National Policy 43-101. Several holes had assays from both Loring, ( denoted as L ), and Acme Analytical Laboratories Ltd., (denoted as A). All historic assays are shown with the hole averages and total depth highlighted in the table below.

Hole No.	Total Depth (meters)	Hole Av. (g/t Au)	Remarks
AK89-01	50.5	0.15	0.30 g/t Au from 7 to 22 m.
AK89-02	60.45	0.28	0.71 g/t Au from 7 to 18 m.

## **NEWS RELEASE**

**December 6, 2006**

The best gold values to date have been encountered along line 16S, and involve holes AK 13, AK 14, and AK 12. Current drilling has begun in this area. Basic prospecting is also ongoing at the project to further define target areas.

On behalf of the Board of Directors of Gold Port Resources Ltd.

Adrian F.C. Hobkirk  
President and C.E.O.
